

# NORMAL DELIVERY

---

After waiting for nine long months for your baby to grow & develop, the time for delivery is exciting and most awaited by most moms-to-be.

Birthing has been always a natural process and at Ankura, we always encourage mom to be to go for normal delivery, unless there is any medical condition or any sentiments attached like muhurtam.

Normal delivery is birthing through the vaginal canal. It starts with the inception of labour pain and culminates with the delivery of your child. One may experience anxiety and one may have to bear labour pain while delivering normally, but the moment you hold your tiny little angel in your hands all you can see and feel is pure love, which makes everything worthwhile.

## **Advantages of having a normal delivery**

- You recover soon
- Lactation starts early
- Chances of future complications reduce
- Lesser chances of breathing problems in the baby
- Better immune system development in the child
- No need for an abdominal surgery
- No need to worry about risks associated with surgery

Ankura hospital for women in children has a team of experts who stay by your side and guide you through each step of your delivery process. Besides, delivering in our luxurious birthing suites with home-like care is sure to make birthing a memorable experience for you.
